A First Course In Linear

A First Course in Linear Algebra is an introductory textbook designed for university sophomores and juniors. Typically such a student will have taken calculus, but this is not a prerequisite. The book begins with systems of linear equations, then covers matrix algebra, before taking up finite-dimensional vector spaces in full generality.

Early in Chapter VS we prefaced the definition of a vector space with the comment that it was "one of the two most important definitions in the entire course." Here comes the other. Any capsule summary of linear algebra would have to describe the subject as the interplay of linear transformations and vector spaces.

Most students need to review linear algebra while taking 328. I will place a few copies of our ccny linear algebra textbook by Gilbert Strang on reserve in the science library. You should be familiar with chapters 1,2,3,4,6,7 in this text. Strang's text is an excellent introduction for the numerical linear algebra we will study in this course.

A First Course in Linear Algebra by Robert A. Beezer

The first half of this text is basically a course in matrix algebra, though the foundation of some more advanced ideas is also being formed in these early sections. Vectors are presented exclusively as column vectors, and linear combinations are presented very early.
