Bosch Port Fuel Injectors (PFI) have a robust design and are capable of using Ethanol fuel (E100). All Bosch fuel injectors released to the aftermarket are OE fit, form and function, and are produced to OE specifications. The Bosch fuel injector has a return rate of 1 part per million (PPM), making Bosch the industry benchmark.

Bosch developed an electronic fuel injection system, called D-Jetronic (D for Druck, German for "pressure"), which was first used on the VW 1600TL/E in 1967. This was a speed/density system, using engine speed and intake manifold air density to calculate "air mass" flow rate and thus fuel requirements.

Fuel pressure in loop line is essential for D-Jetronic. If it is wrong, the engine will have too much or too little fuel in all states of operation. Remember that ECU can only vary opening times of injectors to dose fuel. So pressure must always be within reference.

Fuel Injection component values for D-Jet systems should be verified at the ECU connector, by unplugging the 25 pole connector housing from the ECU and using an multimeter at various terminals. Testing components through the harness in this way also verifies the connecting circuit to each component and may identify a wiring harness problem.
