The last equation is $0x+0y =36$, which has no solution. 14. b. False. The system $x+y =0$, $x−y =0$ is consistent, but x $=0=y$ is the only solution. d. True. If the

original system was consistent the final system would also be consistent because each row operation produces a system with the same set of solutions(by Theorem 1.1.1). 16. The ...

So the original system has a solution if and only if $k + 2g + h = 0$. 26. A basic principle of this section is that row operations do not affect the solution set

of a linear system. Begin with a simple augmented matrix for which the solution is obviously (–2, 1, 0), and then perform any elementary row operations to produce other augmented ...
