Files in the shareware package. Several commercial versions of SPICE run on personal computers, most notably PSpice from Orcad, 888-671-9500. The downloadable Pspice evaluation package has limited capabilities by standards of solid-state circuit design, but it can be amazingly useful in simulating vacuum tube amplifiers, which tend to have fewer components.

Tube testers of the late 1920s and early 30s did not have to test very many tubes. In fact, some early tube testers actually had all the tube numbers they tested stamped next to the appropriate tube socket. The supreme model 17 tube tester shown above was manufactured in the late 1920s and tested the 16 most common tubes at the time.

The best models are "phenomenological" i.e. designed to fit a tube's actual performance curves as closely as possible without regard to underlying physics. There is a program I've used available that will let you take published tube curves, fit the model to the curves, and then spit out a SPICE subcircuit. It works well for triodes, I don't ...
